

**Your core banking solution
in the cloud**

www.qware-banking.com

WHY USE QWARE?

- Powerful digital transformation tool supporting your digital transformation journey
- Software as a Service (SaaS) core banking solution developed by Quipu in collaboration with IPC
- Developed from more than 35 years of experience in providing technical solutions to banks, savings and loans institutions, MFIs and other lending institutions in diverse markets around the globe
- Digital financial platform that enables financial institutions roll out their digitalization agenda for enhancing financial inclusion and supporting local development

QWare supports your institution's digital transformation and financial inclusion through:

- Full loan cycle management
- Integrated workflow management
- End-User reporting
- API integration
- Scoring module
- Transparent role allocation & task processing
- KYC - Client monitoring module

THE SAAS CORE-BANKING THAT ALLOWS YOU TO GROW

Onboarding

Smooth and straightforward onboarding process - we guide you through each step of your digital transformation from platform adoption to staff training

Pricing

Eliminates the expense of on-premise hosting and infrastructure management

Loan process efficiency

Efficiency is core, and technology is the driving force for operating such a business - with integrated workflows which enable standardization and efficiency across operations, QWare simplifies work significantly

Risk management

We built our software on a robust foundation, with architecture that is compliant to E.U. Data Protection Regulations (GDPR), following best practices and models

Platform

Hosted in a world class, modern and reliable Cloud platform, with cutting edge backend database, making it a robust software for day-to-day operations

End-User Reporting

Easily adjustable custom reports, that will fit specific requirements, not only for the institution as a whole but for each end-user as well. The End-User Report Designer allows an institution to delegate the report creation and customization to the end-users.
